Survey Request - Crystal Manufacturing
Melrose Park, Illinois

William H. Miner, Chief
Engineering Section

Richard Bartelt, Chief
Environmental Emergency and
Investigations Branch

On August 28, 1980, Ron Lillich and Eric Moran from the Environmental Emergency and Investigations Branch along with Richard Sustich from the Metropolitan Sanitary District, investigated Crystal Manufacturing in Melrose Park. Subsequent to their investigation enforcement has received information about additional hazardous materials being stored in an as yet uninspected basement area at the site. Confirmation of this reportedly uninspected area is crucial to our enforcement proceedings. Therefore, I am requesting that a follow-up inspection be made of Crystal Manufacturing.

The same surveillance and testing conducted on the first investigation should be performed this time. Also, a list of what products are supposed to be inventoried at the site will be given to the investigators for cross checking.

Please contact Ron Kovach of my staff at 886-6763 as to the inventory list and any questions which you may have.
